Preface

This Technical Specification was prepared by the Standards Australia Committee MB-025, Security and Resilience.

The objective of this Technical Specification is to provide guidance for an organization to establish, implement, and maintain a formal and documented business impact analysis (BIA) process. This Technical Specification does not prescribe a uniform process for performing a BIA, but will assist an organization to design a BIA process that is appropriate to its needs.

This Technical Specification is identical with, and has been reproduced from, ISO/TS 22317:2015, Societal security — Business continuity management systems — Guidelines for business impact analysis (BIA).

As this document has been reproduced from an International Technical Specification, the following applies:

- (a) source text 'this International Technical Specification' should read 'this Australian Technical Specification';
- (b) A full point substitutes for a coma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms 'normative' and 'informative' are used in Standards to define the application of the appendices or annexes to which they apply. A 'normative' appendix or annex is an integral part of a Standard, whereas an 'informative' appendix or annex is only for information and guidance.

Contents

Preface	ii
Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Prerequisites	1
4.1 General	1
4.2 BC programme context and scope	2
4.2.1 BC programme context	2
4.2.2 Scope of the BC programme	2
4.3 BC programme roles	2
4.3.1 BC programme roles and responsibilities	2
