

Australian Standard™

**Sampling procedures for inspection by
attributes**

Part 3: Skip-lot sampling procedures

This Australian Standard was prepared by Committee QR-008, Quality Systems. It was approved on behalf of the Council of Standards Australia on 28 May 2003 and published on 28 July 2003.

The following are represented on Committee QR-008:

Australian Chamber of Commerce and Industry
Australian Industry Group
Australian Information Industry Association
Australian Institute of Petroleum
Australian Organisation for Quality
Bureau of Steel Manufacturers of Australia
Certification Bodies (Australia)
Commonwealth Department of Transport and Regional Services
Department of Agriculture, Fisheries and Forestry (Commonwealth)
Department of Defence (Australia)
Department of Industry Science and Resources (Commonwealth)
Federal Chamber of Automotive Industries
Institute of Materials Engineering Australasia
Institution of Engineers Australia
Main Roads Department, Queensland
Master Builders Australia
Quality Society of Australasia
Royal Australian Chemical Institute

Additional interests participating in the preparation of this Standard:

Australian Quality Council
CSIRO Mathematical and Information Services
Macquarie University
National Association of Testing Authorities Australia
Queensland University of Technology

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Australia web site at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Global Standard*, has a full listing of revisions and amendments published each month.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.com.au, or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

PREFACE

This Standard was prepared by the Standards Australia Committee QR-008, Quality Systems.

This Standard is identical with, and has been reproduced from ISO 2859-3:1991, *Sampling procedures for inspection by attributes, Part 3: Skip-lot sampling procedures*.

The objective of this Standard is to specify general attribute skip-lot sampling procedures for reducing the inspection effort on products submitted by those suppliers who have demonstrated their ability to control, in an effective manner, all facets of quality and who consistently produce lots which meet requirements.

As this Standard is reproduced from an international Standard, the following applies:

- (a) Its number appears on the cover and title page while the international Standard number appears only on the cover.
- (b) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

<i>Reference to International Standard</i>		<i>Australian Standard</i>	
ISO		AS	
2859	Sampling procedures for inspection by attributes	1199	Sampling procedures for inspection by attributes
2859-1	Part 1: Sampling plans indexed by acceptable quality level (AQL) for lot-by-lot inspection	1199.1	Part 1: Sampling plans indexed by acceptable quality level (AQL) for lot-by-lot inspection

Only International Standard referenced documents identical to Australian Standards have been listed.

The terms 'normative' and 'informative' are used to define the application of the annex to which they apply. A normative annex is an integral part of a standard, whereas an informative annex is only for information and guidance.

The International Organization for Standardization's Committee TC 69 is currently in the process of updating the ISO 2859 series to bring the older documents into line with Parts 1 and 4. Where any inconsistency arises between the sections of this series of Standards, the more recently published document will apply.

CONTENTS

	Page
1 Scope	1
2 Normative references	2
3 Definitions	2
4 Supplier and product qualification	2
4.1 Supplier qualification	2
4.2 Product qualification	2
4.3 Example of product qualification	3
5 Skip-lot procedures	3
5.1 Determining the initial skip-lot inspection frequency	3
5.2 Examples of initial frequency determination	5
5.3 Reducing the frequency of inspection	6
5.4 Lot selection and inspection procedures (States 2 and 3)	6
5.5 Interrupt procedures	11
5.6 Requalification procedures	11
5.7 Disqualification	11
6 Supplier responsibilities	11
7 Inspection agency and responsible authority responsibilities	12
8 Characteristics of the skip-lot procedures	12
 Tables	
1 Minimum cumulative sample size to initiate skip-lot inspection	4
2 Acceptance numbers to initiate, continue or resume skip-lot inspection	5
 Figures	
1 Basic structure of the skip-lot procedures	7
2 Determination of the initial skip-lot inspection frequency	8
3 Flowchart for the skip-lot procedures	9-10
 Annexes	
A Summary of the options to be agreed prior to qualification (see 1.2)	13
